

# #87430 Speed Pulse Converter "Twin Signal"

for DAYTONA multifunction computer ASURA, electrical speedometers VELONA, NANO and other electrical speedometers

## features

- ★ Enables electrical speedometers to be used on motorcycles/ATV's with a mechanical speedometer.
- ★ Converts mechanical movement of the speedometer gear/cable to electrical pulse signal, and then sends the pulse signal to the electrical speedometers.
- ★ Requires to recalibrate the speedometer according to the speedometer's installing instruction.
- ★ Needs stable 12V power supply to run the converter
- ★ Won't work with 6V or AC12V vehicles

## wiring

※When OEM mechanical speedometer is removed and unused, the cap is to be mounted.
